

# ***SERVER CONFIGURATION USING PROFILE TEMPLATES***

## **Abstract of Disclosure**

The configuration of servers using profile templates is disclosed. A profile template for configuring one or more servers is loaded. The profile template includes abstracted server configuration parameters and server configuration rules, and can be abstracted from parent profile templates. The parameters are for abstractly configuring a server type of which the servers are, whereas the rules specify how values of the parameters translate to direct server values for directly configuring the servers, based on attributes of the servers. A user is requested to modify preset of the parameters, and/or enter missing values of the parameters. Finally, a configuration for each server is generated as the values of the parameters, and the server configuration rules.

## Figures

Figure 1: A line graph showing the relationship between the number of hours spent on a task and the number of errors made. The x-axis represents 'Hours' (0 to 10) and the y-axis represents 'Errors' (0 to 10). The data points are as follows:

Hours	Errors
1	2
2	3
3	4
4	5
5	6
6	7
7	8
8	9
9	10
10	11

The graph shows a positive linear relationship between hours and errors.
